Data-driven actions to grow watch time

BrightTV Analytics

Jan – Mar 2016

1 Cricket World Cup drove March spike

March reached 4,821 sessions vs January 2,203 (+118.8%). Lock long-term sports rights and add live-event push notifications.

2 Prime time concentrates around 17:00

The 14:00–21:00 window dominates. Sell premium ad inventory and feature rotations during this window.

3 Top channel: Supersport Live Events

Concentration risk on a single channel. Diversify recommendations and surface adjacent categories to reduce dependency.

4 Weekend uplift

Saturday & Sunday show notable uplift. Schedule premieres and family-friendly content for weekend evenings.

5 Geo skew toward Gauteng

Audience concentrated in select provinces. Localise carousels, language defaults and marketing per region.

6 Audience gender balance

male: 90%, female: 10%. Tailor on-platform messaging and creative tone per segment.

7 Data quality wins

Standardise channel naming (e.g., SawSee variants) and validate Duration_Seconds at ingest to lift report accuracy.

8 Churn early-warning

Flag users with 14+ days of inactivity as at-risk; trigger reactivation push using their top-3 categories.
