Bright_TV Subscription Growth & Consumption Insights

Key Findings and Recommendations

Objective

Analyze User Behavior

- Understand engagement patterns using session-level data

Identify Peak Performance Windows

- Determine highest activity periods by day and time

Assess Sports Content Impact

- Evaluate how sports-driven viewing influences engagement

Compare Weekday vs Weekend Trends

- Highlight differences in user activity and performance

Drive Data-Led Optimization

- Inform content scheduling and marketing strategies

Key Insights

- Sports-driven platform
- Weekend & afternoon peaks
- Weak weekday engagement

Key Highlights

Sports-Driven Platform

- Engagement is heavily influenced by sports-related content and events
- Performance likely spikes around live matches or key sporting moments

Weekend & Afternoon Peaks

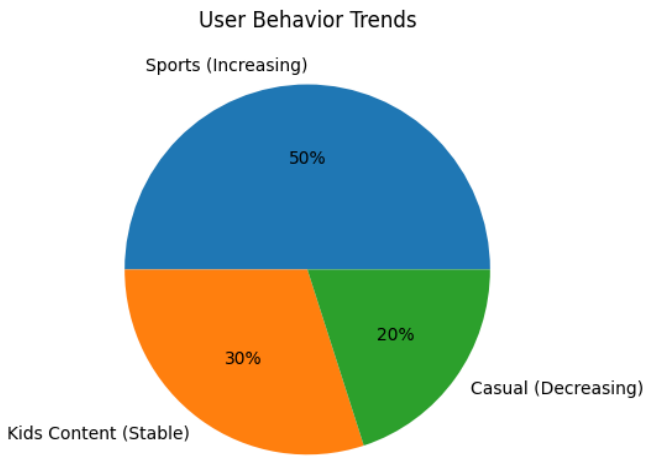
- Highest activity occurs during weekends, particularly in the afternoon
- Aligns with typical sports viewing habits and increased user availability

Weak Weekday Engagement

- Lower interaction levels during weekdays
- Suggests reduced user attention outside of key sports events

NB: Performance is strongly tied to **sports schedules**, with clear peaks on **weekends and afternoons**

User Behavior Trends



Key Insights

Sports as Primary Driver

- Sports content leads engagement and continues to show **strong growth potential**
- Users are increasingly drawn to **live and high-interest events**

Decline in Casual Viewing

- Reduced interest in passive, non-specific content
- Users are becoming more **intent-driven and selective** in their viewing habits

Stable Kids Content Consumption

- Kids content remains **consistent and reliable**
- Provides a **steady baseline audience** regardless of time or day

Viewing Time Trends

- Peak: 14:00–18:00
- Strongest at 17:00
- Low late night

Key Highlights

Peak Period: 14:00 – 18:00

- Highest activity levels observed in the afternoon window
- Indicates strong user engagement during post-lunch hours

Strongest Hour: 17:00

- Absolute peak in performance
- Optimal timing for maximum visibility and impact

Late Night – Low Performance

- Significant drop in activity during late hours
- Limited engagement and reduced effectiveness

Key Takeaway

- Focus efforts during the **afternoon peak (14:00–18:00)**, especially at **17:00**, to
- maximize reach and results

Recommendation

- Schedule key campaigns, content releases, or ads around **late afternoon**
- Avoid heavy investment in **late-night slots**, or use them for low-priority activities

Weekly Usage Trends

- Saturday highest
- Friday strong
- Monday lowest

Key Highlights

Saturday – Highest Performance

- Peak activity and engagement
- Strongest opportunity for impact

Friday – Strong Performance

- Builds momentum into the weekend
- Ideal for campaign launches and promotions

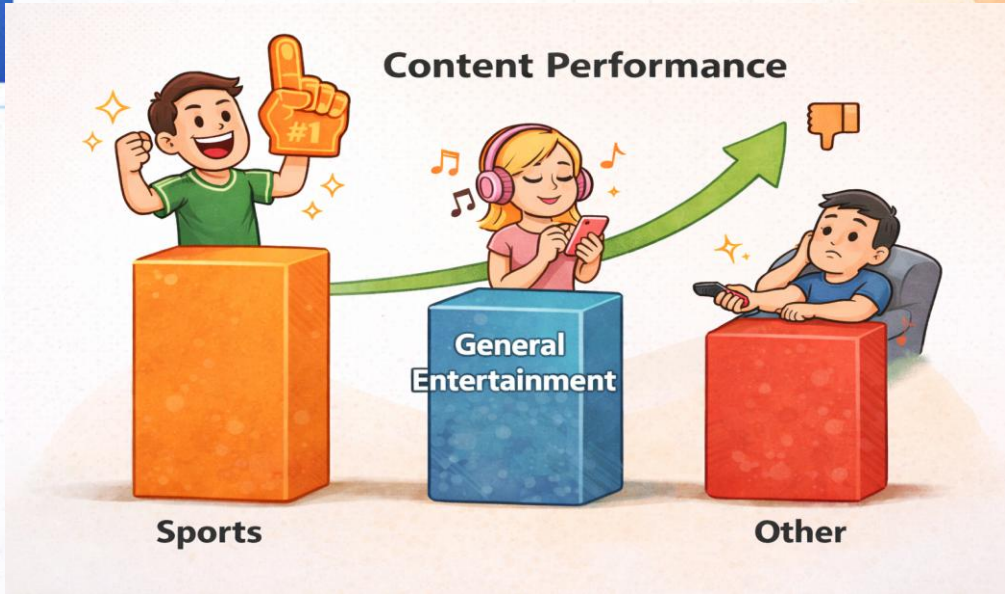
Monday – Lowest Performance

- Slow start to the week
- Reduced engagement levels

Key Takeaways

- ❑ Maximize efforts on **Friday & Saturday** to capture peak engagement
- ❑ Implement **boosting strategies on Monday** to improve performance

Content Performance



Top Performer: Sports

- Highest audience engagement
- Primary driver of platform activity

Mid Performer: General Entertainment

- Moderate and consistent engagement
- Supports overall content mix

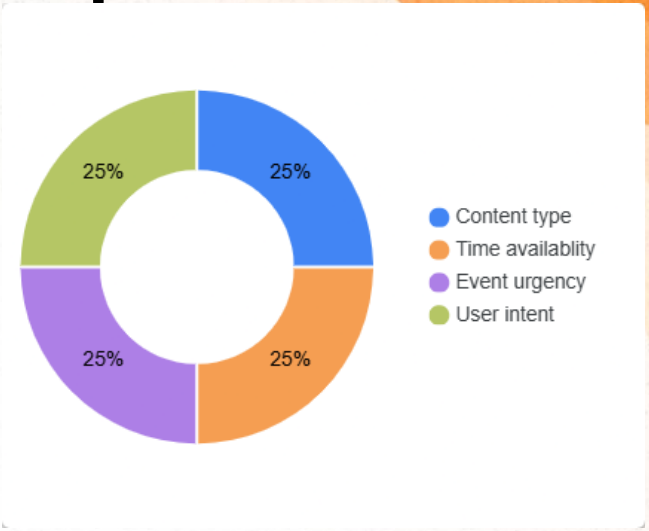
Low Performer: Other

- Lowest engagement levels
- Underperforming compared to other categories

Key Insight

- Sports dominates audience engagement, positioning it as the core growth driver for the platform
- General entertainment underperformance signals a need for content refinement, repositioning, or improved targeting

Consumption Drivers



Content Type

- Engagement varies significantly by content category

Sports content drives the highest interaction, while other types require stronger positioning to compete

Time Availability

- User activity aligns with **free time windows**, especially afternoons and weekends
- Peak engagement reflects when users are most available to consume content

Event Urgency

- **Live and time-sensitive events** (e.g., sports matches) create spikes in engagement
- Urgency increases immediate user action and repeat visits

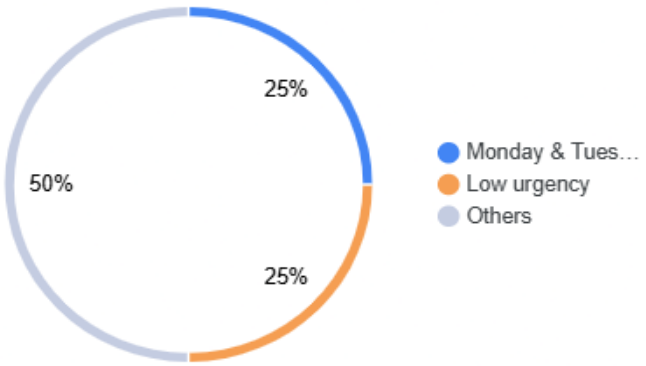
User Intent

- Users show **goal-driven behavior**, particularly for live or anticipated content
- Intent is stronger for **specific, high-interest content** (e.g., sports), leading to higher engagement levels

Key Takeaway

- Engagement is driven by a combination of **relevant content type, user availability, and urgency of events**, all aligned with **clear user intent**

Low Consumption Days



Monday & Tuesday – Lowest Engagement

- Consistently underperform compared to the rest of the week
- Marked by reduced user activity and interaction

Low Urgency

- Lack of live or high-priority events limits immediate user interest
- Content consumption is more passive and less time-sensitive

Weak Engagement

- Shorter sessions and lower return frequency
- Reduced motivation to actively seek content

Recommendations

Content Strategy

Prioritize Sports Content

- Increase investment in live and exclusive sports programming
- Leverage high-demand events to drive traffic and retention

Optimize General Entertainment

- Refresh content mix and improve targeting
- Test new formats or localized content to boost engagement

Strengthen Supporting Content (Music)

- Use music content to maintain steady engagement between peak sports events

Scheduling & Timing

Focus on Peak Windows

- Concentrate key releases during **weekends and afternoon hours (14:00–18:00)**
- Maximize visibility around the **17:00 peak**

….Continuation

Enhance Low-Performance Periods

- Introduce lighter or personalized content on weekdays, especially Mondays
- Use off-peak times for replays or on-demand content

User Engagement

Leverage Event Urgency

- Promote live events with countdowns, reminders, and notifications
- Create “must-watch” moments to drive real-time engagement

Personalization

- Recommend content based on user behavior and preferences
- Segment audiences to deliver more relevant experiences

Marketing & Growth

Align Campaigns with Sports Calendar

- Time marketing pushes around major matches and tournaments
- Use sports as the primary acquisition driver

Drive Weekday Engagement

- Launch targeted campaigns or incentives to improve midweek activity

Growth Strategy

- Convert users to subscribers – Turn free users into paying customers.
- Monetize high-demand content – Maximize revenue from popular content.
- User Growth through Referrals – Gain users via customer referrals.
- Social media – Attract users through digital channels.
- Free trials – Drive conversion through trial access.
- Identify inactive users – Detect disengaged users early.
- Send reminders – Re-engage users with prompts.

Conclusion

- ✓ The South African BrightTV viewership dataset (Jan–Apr 2016) reveals a rich but concentrated viewing landscape with clear opportunities for strategic growth.
- ✓ **Sports is king:** SuperSport Live Events and ICC Cricket World Cup dominate viewership, especially among male viewers in Gauteng and Western Cape.
- ✓ **Music & entertainment are vital:** Trace TV, Channel O, and Africa Magic drive significant engagement among black and coloured audiences.
- ✓ **March is peak season:** Viewership spikes in March 2016 are directly linked to cricket events — content scheduling should align with sports calendars.
- ✓ **Female and youth audiences are underserved:** Targeted programming investment in these segments can meaningfully grow the user base.
- ✓ **Geographic concentration is a risk**: Over-reliance on Gauteng viewership creates vulnerability; diversification into other provinces is a strategic priority.
